Crop Insurance**

What is Dairy Revenue Protection (Dairy RP)?

Dairy RP is an area based revenue product designed to insure against unexpected declines in the revenue from milk sales. Dairy producers may choose from a variety of milk pricing options that align with the Federal Milk Marketing Order end-product pricing formulas and the manufacturing value of Class III and Class IV milk. Policies correspond to the quarters of the calendar year, and producers may purchase policies for up to five nearby quarters.

What can be covered?

Producers may cover up to 95 percent of their expected quarterly revenue. At the end of the insurance period, if the actual milk revenue is below the final revenue guarantee, the producer may receive an indemnity payment. The payment amount is based on the difference between the final revenue guarantee and the actual milk revenue multiplied times the share and protection factor.

Class Pricing Option

Under the Class Pricing Option, Dairy RP provides revenue protection based on an index of state-level revenue constructed with Class III and Class IV milk prices. The producer can choose the percent of Class III and Class IV used to establish their Price Guarantee per hundredweight to tailor to their operation.

Component Pricing Option

The Component Pricing Option is revenue protection based on milk component production, including butterfat, protein, and other solids. The producer can select the desired butterfat percentage and protein percentage. The other solids percentage is fixed at 5.7%.

Protect your dairy operation against declines in production and milk prices.
